

REP-# 165

The slideways and bedways of 10 elder threading machines for the processing of drilling rods for the natural gas and oil industry have been rebuilt with Molymetall by injection/moulding. The application thickness was partly up to 7 mm. Because of the high wear resistance, the very low coefficient of friction and the self-lubricating properties of Molymetall the customer is very satisfied after several previous failed repairs with competitive products. The machines are in service again successfully for several years.
